Cyrus System Navigator
User Instructions

System Navigator Compatibility

The *System Navigator* remote control handset will send commands to Cyrus DVD players, Surround decoders, Stereo amplifiers, CD players, and Tuners. You can therefore build a two channel or multi-channel *Cyrus* system and control all primary functions with one handset.

Compatible products (at the time of publishing)

DVD players .... Cyrus DVD8, Cyrus DVD7+, Cyrus DVD7.

Surround decoders .... Cyrus AV8, Cyrus AV5 (original AV Preamplifier handset required for decoder configuration).

Stereo amplifiers .... Cyrus 8, Cyrus 7, Cyrus 6, Cyrus 5, Cyrus aCA7, Cyrus aCA7.5, Cyrus IIIi.

CD players .... Cyrus CD7, Cyrus dAD3, Cyrus dAD1, Cyrus dAD1.5, Cyrus dAD7, Cyrus Discmaster/Dacmaster.
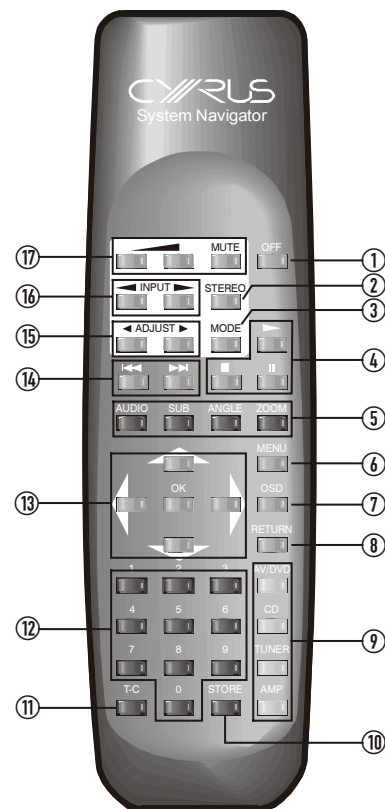

FM tuners .... Cyrus FM7.5, Cyrus FM7 (The *System Navigator* will store and recall up to 29 presets in an FM tuner. Press STORE followed by the preset location numbers to store each preset).

Power Control and Selecting System Components

The yellow system select keys are used to select which part of your system you want to control and to turn on the power for the correct components. The *System Navigator* retains this setting until it is next changed.

- Press AV/DVD to set the handset to AV/DVD mode and switch on a DVD player and/or surround decoder. This key will also switch on a Cyrus stereo amplifier (when used) and select the AV/VI input. The *System Navigator* is now set to send commands to DVD players and Surround decoders.

- Press CD to set the handset to CD mode and switch on the CD player and a stereo amplifier. This key will also select the correct CD input of a stereo amplifier. The *System Navigator* is now set to send commands to CD players and stereo amplifiers.

- Press TUNER to set the handset to TUNER mode and switch on an FM tuner and a stereo amplifier. This key will also select the correct TU input of a stereo amplifier. The *System Navigator* is now set to send commands to Tuners and stereo amplifiers.

- Press AMP to set the handset to AMPLIFIER mode and switch on a stereo amplifier only. The last used input will remain selected. Choosing this mode will activate only the keys of the *System Navigator* which send commands to stereo amplifiers.
